NP Game Booster

Features of Game Booster

Clean Data, Cache and Cookies

Tunes up the system extensively by removing unnecessary resource data, cache and cookies.

Run time Game Optimization

When a game is running, it is given the first priority for system resource allocation. This results in an optimized and enhanced gaming experience.

RAM Boost

Your computer uses random access memory (RAM), a crucial and quick form of short-term storage, to keep active data. PC Game booster ensures that this memory is sufficiently assigned to gaming applications without slowing down other processes.

CPU, Memory, GPU

NPAV's PC Game Booster monitors and optimizes CPU, GPU and RAM to speed-up and smoothen the gaming performance of your PC. GPU optimization ensures that FPS (Frame Per Second) is provided at its highest capacity without lending too much load.

Process Booster

PC Game Booster enhances and boosts processes categorized as games. These processes are handed optimum resources and priorities during execution.

Service Booster

Optimum resource allocation and management leads to optimization of services which in turn lead to fast performing PC.

Loading game list directly and manually

It provides a preset list of games from our library. If a user wishes to manually add any games which are out-of-date or not yet present in our library, they can do so easily by using PC Game Booster.

Bloatware

Game Booster provides an option which allows users to monitor software requiring large memory and resources.

Applying this special setting can boost your PC's performance by 10x.

System Performer Booster

Streamlines games and software to make your PC gaming-friendly. Uses Game defragger to enhance gaming quality exponentially.
